TEST PLAN

Project: OpenCart E-Commerce Website Testing

Application Under Test: demo.opencart.com

Prepared By: Suhavi jindal

---

1. Introduction

1.1 Purpose

This Test Plan defines the strategy, scope, objectives, approach, resources, schedule, and deliverables for testing the OpenCart demo e-commerce website.

1.2 Objective

To verify that all functional and non-functional requirements of the OpenCart application work as expected and meet quality standards.

---

2. Scope of Testing

2.1 In Scope

- User Registration
- User Login & Logout
- Product Browsing
- Search Functionality
- Shopping Cart
- Checkout Process
- Payment Module
- Order Management
- Admin Panel (Basic Testing)

2.2 Out of Scope

- Third-party payment gateway real transaction validation
- Server-side source code testing
- Database-level deep validation

---

3. Testing Approach (Step-by-Step Execution Plan)

We will follow **STLC (Software Testing Life Cycle)**:

◈ Step 1: Requirement Analysis

- Study FRS document
- Identify testable requirements
- Prepare Requirement Traceability Matrix (RTM)
- Clarify doubts (if any)

Deliverable:
✓ Reviewed FRS
✓ RTM (Draft)

◈ Step 2: Test Planning

- Define scope
- Identify test types
- Define testing tools
- Estimate effort & timeline
- Identify risks

Deliverable:
✓ Approved Test Plan

◈ Step 3: Test Scenario Identification

High-Level Scenarios:

- Validate registration functionality
- Validate login functionality
- Validate search results
- Validate cart calculation
- Validate checkout workflow
- Validate order confirmation
- Validate admin product management

Deliverable:
✓ Test Scenarios Document

◈ Step 4: Test Case Design

For each scenario:

- Write positive test cases
- Write negative test cases
- Boundary value testing
- Error handling validation

Example:

TC ID	Module	Description
TC_01	Login	Verify login with valid credentials
TC_02	Login	Verify login with invalid password
TC_03	Cart	Verify cart total calculation

Deliverable:
✓ Detailed Test Cases
✓ Test Data

◈ Step 5: Test Environment Setup

Environment:

- Browser: Chrome, Firefox, Edge
- OS: Windows 10/11
- Internet connection
- Test accounts

Deliverable:
✓ Environment Ready Confirmation

◈ Step 6: Test Execution

- Execute test cases

- Mark status (Pass/Fail/Blocked)
- Capture screenshots
- Log defects

Deliverable:
✓ Execution Report
✓ Defect Log

◈ Step 7: Defect Reporting & Tracking

For each defect:

- Defect ID
- Severity (Critical/High/Medium/Low)
- Priority
- Steps to Reproduce
- Expected Result
- Actual Result
- Screenshot

Deliverable:
✓ Defect Report

◈ Step 8: Regression Testing

- Re-test fixed defects
- Verify no impact on other modules

Deliverable:
✓ Regression Report

◈ Step 9: Test Closure

- Prepare Test Summary Report
- Validate coverage using RTM
- Confirm exit criteria met

Deliverable:
✓ Test Summary Report
✓ Final RTM

---

4. Types of Testing to be Performed

Testing Type	Purpose
Smoke Testing	Verify build stability
Functional Testing	Validate all features
Regression Testing	Ensure defect fixes don't break system
System Testing	End-to-end validation
Performance Testing	Check response time
Security Testing	Validate authentication & session

---

5. Entry & Exit Criteria

Entry Criteria:

- FRS approved
- Test Plan approved
- Test cases prepared
- Environment ready

Exit Criteria:

- 100% test cases executed
- Critical & High defects closed
- Test summary prepared

---

6. Risk Management

Risk	Mitigation
Demo site reset	Backup test data
Payment simulation failure	Use test payment mode

Risk	Mitigation
Browser compatibility issues	Cross-browser testing

---

7. Deliverables

- Test Plan
- Test Scenarios
- Test Cases
- RTM
- Defect Report
- Test Summary Report

---

8. Timeline (Example 3–4 Weeks Plan)

Week	Activity
Week 1	Requirement Analysis & Test Planning
Week 2	Test Case Design
Week 3	Test Execution & Defect Logging
Week 4	Regression & Test Closure

---

9. Conclusion

This Test Plan ensures a structured, step-by-step testing approach to validate the OpenCart E-Commerce application effectively and professionally at industry standards.
